

## Cleanup

Now that you've completed the locality load balancing tasks, let's cleanup.

## Remove generated files

## Remove the sample namespace

```
$ for CTX in "$CTX_PRIMARY" "$CTX_R1_Z1" "$CTX_R1_Z
2" "$CTX_R2_Z3" "$CTX_R3_Z4"; \
    do \
    kubectl --context="$CTX" delete ns sample --ign
ore-not-found=true; \
    done
```

**Congratulations!** You successfully completed the locality load balancing task!
