Cleanup

Now that you've completed the locality load balancing tasks, let's cleanup.

Remove generated files

```
$ rm -f sample.yaml helloworld-region*.zone*.yaml
```

Remove the `sample` **namespace**

```
$ for CTX in "$CTX_PRIMARY" "$CTX_R1_Z1" "$CTX_R1_Z2" "$CTX_R2_Z3" "$CTX_R3
_Z4"; \
  do \
    kubectl --context="$CTX" delete ns sample --ignore-not-found=true; \
  done
```

Congratulations! You successfully completed the locality

load balancing task!
